## Contents

Preamble for the module handbook.....	6
Common Modules.....	7
M01 Technical Management .....	8
M02 Team Project .....	11
M03 Internship.....	13
M04 Master Module .....	16
MWP01 Elective 1 .....	18
MWP02 Elective 2.....	18
MWP03 Elective 3.....	18
Common Elective Modules (general electives) .....	20
MGwp01 Research Project.....	21
MGwp02 Selected Research Topics .....	23
MGwp03 Ethics, Engineering, and Ecology .....	25
MGwp04 Legal English for Engineers .....	28
Major Automation - mandatory .....	31
MA01 Safety in Industrial Automation.....	32
MA02 Adaptive Control, Modeling and Identification .....	35
MA03 Computer Vision .....	38
MA04 Advanced Programming Techniques.....	41
MA05 Industry 4.0/IIoT and the Digital Factory.....	44
MA06 Industrial Robotics .....	47
MA07 State Space Control Design .....	49
Major Automation - electives .....	52
MAwp01 Model-based Real-time Simulation of Mechatronic Systems.....	43
MAwp02 High Level Language Frameworks.....	56
MAwp03 Human Machine Interfaces (HMI) .....	58
MAwp04 Autonomous Mobile Robots.....	61
MAwp05 Advanced Graphical Programming of Control Systems .....	64
MAwp06 Advanced Sensors for the Internet of Things .....	66
Major Automation – general electives / electives from other majors .....	68
MGwp01 Research Project.....	68
MGwp02 Selected Research Topics .....	68
MGwp03 Ethics, Engineering, and Ecology .....	68
MCwp01 Digital Signal Processing Applications.....	68
MCwp02 Wireless Systems (Technologies) .....	68
MCwp03 Network Security .....	68

MCwp04	Mobile Communications .....	68
MCwp05	Optical Communications.....	68
MCwp06	(I)IoT and Cloud Networking .....	68
MCwp08	Image and Video Processing .....	68
MMwp02	Safety in Embedded Control Systems .....	68
MMwp04	Advanced Software Design Techniques.....	68
MMwp05	Security in Connected Embedded Systems .....	68
MMwp07	Advanced Driver Assistance Systems and Automated Driving .....	68

## Preamble for the module handbook

### Definition of competence levels for entering the goals (point 3)

This module handbook uses competence level to design the description of goals (point 3) in a concise and transparent manner. The competence levels indicate the level of in-depth content conveyed, i.e. knowledge (theory and/or factual knowledge) and skills (the practical and/or cognitive application of methods, processes and procedures) and to what extent the students should be able to use this knowledge or these skills at work and in everyday life. Depending on the classification of the content in point 2, one of the competence levels of to know, to understand, to apply and to transfer are specified in point 3 as the learning and qualification goal for the main topics and, where applicable, for their sub-topics. If it makes sense, a level should also be stated for competences and skills implicitly arising from the content. For topics/competencies/skills which are dealt with in several successive modules, a higher qualification level can be achieved in the course of the degree program. If, for example, a topic in a module which is specified as a (recommended) prerequisite (point 7 or 8) is given the competence level to know, and if the topic is covered again in a later module, the competence level for this topic can be set to to understand. Using the competence levels, a differentiation between the Bachelor and Master level can be made clearer, e.g.:

Bachelor's degree program: For most topics in the basic study program, the levels to know and to understand are strived for. For topics which are dealt with again in the major, the next level up –to understand or to apply–can be strived for.

Master's degree program: Topics where prior knowledge from the previous Bachelor's degree program is required, can have the competence level of to apply or to transfer.

The competence levels also offer a specific basis for the competence-orientated recognition of credit points, as well as proven extracurricular competencies, for the modules of the degree program.

Competence level	Definition	Definition of work	Time required*
Lowest <b>to know</b>	Reproduction and allocation of terms, processes, structures and conventions from the subject area	The students have already heard something about the topic and can allocate the topic to the right subject area. They can only apply methods to solve problems relating to this topic in a repetitive manner to known problems. They are not able to transfer any knowledge.	1 – 3 1 to 2 blocks
Third highest <b>to understand</b>	Reproducible solving of equivalent or similar problems; confident handling of conventions and terms	The students can recognize standard problems relating to the topic and solve them by the confident application of methods. They are able to transfer knowledge if it concerns a very similar problem.	> 3 – 7 3 to 5 blocks
Second highest <b>to apply</b>	Solving specific problems from the whole subject area; inversion of problems; forming of analogies	The students can solve problems from the subject area which they are not familiar with. For this purpose, they can independently combine and modify the methods they have learned. They are able to transfer knowledge.	> 7 – 12 6 to 8 blocks
Highest <b>to transfer</b>	Solving general technical problems with the aid of knowledge gained; routine application and critical evaluation of knowledge, processes and methods	Students can develop solutions for technical problems, not restricted to the subject area, using the knowledge acquired and the methods and processes learned in the subject area. They are able to develop and implement solutions in a team.	> 12 – 25 9 to 19 blocks

\* Number of hours required to achieve the competence level (reference)

Table 1: Definition of the competence levels to describe the learning and qualification goals (point 3)

The table contains the definitions of the competence levels. The levels and their definitions are based on an investigation to determine the core curriculum of electrical engineering, performed by the EIT Faculty Conference. The definitions of the competence levels have been made more specific for application in the module handbook (work definition). The final column states the time period in which the respective topic must be dealt with in the lessons (time required) to achieve the respective level. These values are taken from the same source as the competence levels and should be used as references.

In some modules, like the Master module, the existing classification methods are not applied, as, for example, no specific content can be provided. For these modules, the goals are specified according to the classification: knowledge, skills, competencies.

## **Electrical Engineering and Information Technology - international**

**Master of Science**

### **Common Modules**

## M01 Technical Management

<b>1</b>	<b>Module Name</b> Technical Management
<b>1.1</b>	<b>Module Identifier</b> M01
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Project Management - Lecture Engineering Responsibility - Lecture
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Fromm
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Haid, NN SuK
<b>1.7</b>	<b>Study Program</b> Master / all majors
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><u>Content of course "Project Management"</u></p> <p>This course provides an introduction to professional project management. It covers the areas</p> <ul style="list-style-type: none"> <li>- introduction into industry process models, e.g. CMMi and SPICE,</li> <li>- project structure, phases, roles and workflow,</li> <li>- relevant methods for requirements engineering, concept development, realization and testing</li> <li>- planning and estimation methods,</li> <li>- risk management,</li> <li>- project tracking metrics,</li> <li>- team building and team management,</li> <li>- change and configuration management,</li> <li>- quality assurance and reviews,</li> <li>- agile methods like SCRUM.</li> </ul>

	<p><u>Content of course “Engineering Responsibility”</u></p> <p>This course provides an introduction into legal aspects of engineering and discusses the aspect of engineering responsibility. It covers the areas</p> <ul style="list-style-type: none"> <li>- legal and ethical aspects of engineering responsibility</li> <li>- relevance of penal law, civil law and liability</li> <li>- patent rights</li> <li>- employment law</li> <li>- special liability for safety and security systems</li> <li>- relevant differences in German, European and international laws</li> </ul>
<p><b>3</b></p>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- the most relevant laws related to engineering, such as             <ul style="list-style-type: none"> <li>o Intellectual Property rights (copyrightable and patentable subject matter, infringement of IP rights)</li> <li>o Contract, labor and data privacy law</li> <li>o Liability and warranty (including product liability, torts, misdemeanors and crimes, breach of contract)</li> </ul> </li> <li>- the differences in German, European and international laws</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- industrial engineering and management processes</li> <li>- modern methods of project management</li> <li>- planning and estimation techniques</li> <li>- risk management techniques</li> <li>- configuration and change management techniques</li> <li>- quality assurance methods like reviews</li> <li>- professional team communication techniques</li> <li>- rules of law to product management</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the project management techniques into new project scenarios</li> <li>- legal awareness into product development and utility scenarios</li> </ul>
<p><b>4</b></p>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / seminar (S)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching.</p> <p>Project Management: 2 SWS V Engineering Responsibility: 2 SWS V</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> none</p> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes</p>

<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO)</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for all majors.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Electronic lecture notes</li> </ul> <p>Further literature recommendations will be provided during the lecture.</p>

## M02 Team Project

<b>1</b>	<b>Module Name</b> Team Project
<b>1.1</b>	<b>Module Identifier</b> M02
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Team Project - Project
<b>1.4</b>	<b>Semester</b> 1 or 2 (summer term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Fromm
<b>1.6</b>	<b>Additional Instructors</b> All instructors of the master's program
<b>1.7</b>	<b>Study Program</b> Master / all majors
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Content of course "Team Project"</b></p> <p>In this course, the students execute a practical project using the methods presented in the module "Technical Management". It covers the areas:</p> <ul style="list-style-type: none"> <li>- practical development of a technical system (project work)</li> <li>- project management and work package agreement,</li> <li>- requirements engineering, system design,</li> <li>- implementation and testing,</li> <li>- team building and team communication,</li> <li>- and documentation and presentation of the results.</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- project roles, phases and workflows</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- workpackage definition and assignment</li> <li>- modern methods of project management and engineering</li> </ul>

	<ul style="list-style-type: none"> <li>- professional team communication techniques</li> <li>- project presentation</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the project management and engineering techniques into new project scenarios</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>Project</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, project work including meetings with the instructors.</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p>The examination consists of the project work and the project presentation. As a consequence, a withdrawal from the project is only possible once within the first 2 weeks of the project. A later withdrawal will be marked as "not passed". For details, please check § 13 para. 5 BBPO.</p> <p><b>Examination Prerequisites:</b> Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending Project</li> <li>- Project Progress</li> </ul> <p><b>Examination Type:</b></p> <ul style="list-style-type: none"> <li>- Project presentation and Report</li> <li>- Milestone review</li> </ul> <p><b>Examination Duration:</b> Project presentation 30 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for all majors.</p>
<b>11</b>	<p><b>Literature</b></p> <p>Literature recommendations will be provided during the project.</p>

## M03 Internship

<b>1</b>	<b>Module Name</b> Internship
<b>1.1</b>	<b>Module Identifier</b> M03
<b>1.2</b>	<b>Module Type</b> Mandatory / 4 semester course
<b>1.3</b>	<b>Course Names</b> German Class 1 and 2 – Lecture Preliminary Seminar – Seminar Internship
<b>1.4</b>	<b>Semester</b> <ul style="list-style-type: none"> <li>- German classes are offered during winter semester (extensive phase). Additional intensive courses will be offered in the month September and February/March (intensive phase).</li> <li>- The internship generally takes place in the third semester of the 4 semester course. The internship is offered in both winter and summer semester.</li> </ul>
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Krauß, Head of the „Sprachenzentrum“ (FB GW)
<b>1.6</b>	<b>Additional Instructors</b> All instructors of the master’s program can act as academic supervisor for the internship part. instructors of the „Sprachenzentrum“
<b>1.7</b>	<b>Study Program</b> Master / all majors
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> <p><b>Content of German Class:</b></p> <ul style="list-style-type: none"> <li>- German Class 1: A1 level or higher</li> <li>- German Class 2: higher than German Class 1 level, at least A2 level</li> </ul> <p><b>Content of Preliminary Seminar:</b></p> <ul style="list-style-type: none"> <li>- Preparative items (such as regulations and application matters) are presented.</li> </ul> <p><b>Content of Internship:</b> The student has to solve an engineering task in the area of electrical engineering and information technology under the guidance of an industrial supervisor and an academic supervisor. This internship work can involve one of the following areas:</p>

	<ul style="list-style-type: none"> <li>- Research and development work</li> <li>- Project planning and design</li> <li>- Manufacturing, preparation of work</li> <li>- Assembly</li> <li>- Test bed, quality control</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p>The objectives of the internship are as follows:</p> <ul style="list-style-type: none"> <li>- Create a linkage between the studies and the world of work</li> <li>- Orientation in the profession strived for</li> <li>- Get to know technical and organizational contexts</li> <li>- Involvement in the process of work</li> <li>- Practical training in the engineering trade in one or several projects.</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>Lecture, seminar, practical work by fulfilling tasks of engineering work and documentation</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>30 CP / 900 hours in total</p> <ul style="list-style-type: none"> <li>- German class 1 and 2: 6 SWS in total, 84 hours classroom teaching in total. Additional intensive preparation courses will be offered during semester breaks.</li> <li>- Internship: 26 weeks full-time work in a company</li> </ul>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>German Classes</b>  <b>Examination Prerequisites (German Class 2):</b> German Class 1 has been successfully passed.  <b>Examination type:</b> A combined written and oral examination will be offered in each class.</p> <p><b>Internship</b>  <b>Examination Prerequisites:</b> The Preliminary Seminar must have been attended and at least German Class 1 (level A1 or higher) must have been successfully passed before the start of the internship.  <b>Examination Type:</b>          Students must prepare a technical report on their internship work with a range of 30 to 40 pages. The report shall be submitted to the academic supervisor at the latest 2 weeks after the work has ended (and otherwise at the latest before the master thesis starts). The report will be assessed and evaluated by the academic supervisor.</p> <p>The successful completion of the internship part is acknowledged by the academic supervisor, provided that the prerequisites defined in § 10 para. 4 are fulfilled.</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>The necessary prerequisites are defined in § 10 para. 2 BBPO</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>A total of 45 CP is recommend to be completed before the start of the internship work.</p>

<b>9</b>	<b>Duration and Frequency of Course</b> The internship module consists of the internship part (practical work) itself and preparatory lectures. The internship part lasts 26 weeks. It may be undertaken any time.
<b>10</b>	<b>Applicability /Utilization</b> The module provides the prerequisites for the Master thesis. It is applicable for all majors.
<b>11</b>	<b>Literature</b> ---

**M04 Master Module**

<b>1</b>	<b>Module Name</b> Master Module
<b>1.1</b>	<b>Module Identifier</b> M04
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Thesis Colloquium
<b>1.4</b>	<b>Semester</b> 3 semester course: 3 (winter term) 4 semester course: 4 (summer term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Head of the examination board
<b>1.6</b>	<b>Additional Instructors</b> All instructors of the master's program
<b>1.7</b>	<b>Study Program</b> Master / all majors
<b>1.8</b>	<b>Teaching Language</b> N/A
<b>2</b>	<b>Module Content</b> - Practically and/or theoretically oriented scientific work in the area of the chosen major - Written thesis - Colloquium
<b>3</b>	<b>Learning Outcome / Competencies</b> Students should demonstrate the following qualifications within the area of the defined topic: - Capability of independent work - Systematic analysis and solutions using engineering and scientific methods - Professional competence in scientific documentation and presentation of results
<b>4</b>	<b>Course Organization and Structure</b> final thesis (FT)

<b>5</b>	<b>Credits and Workload</b> 30 CP / 900 hours in total.
<b>6</b>	<b>Examination Modalities</b> <b>Examination type:</b> Master thesis under § 12 para. 4 and 5 BBPO Colloquium under § 12 para. 6 and 7 BBPO The assessment ratio of thesis and colloquium are defined in § 12 para. 8 BBPO.
<b>7</b>	<b>Necessary Prerequisites</b> The necessary prerequisites are defined in § 12 para. 3 BBPO.
<b>8</b>	<b>Recommended Prerequisites</b> All mandatory modules of study program
<b>9</b>	<b>Duration and Frequency of Course</b> The master thesis must not exceed 6 months. With the approval of the examination board, the master thesis may be undertaken at any time.
<b>10</b>	<b>Applicability /Utilization</b> This module is applicable for all majors.
<b>11</b>	<b>Literature</b> Will be recommended by supervisors.

**MGwp03 Ethics, Engineering, and Ecology**

<b>1</b>	<b>Module Name</b> Engineering Ethics
<b>1.1</b>	<b>Module Identifier</b> MGwp03
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Ethics, Engineering, and Ecology
<b>1.4</b>	<b>Semester</b> summer term or winter term
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Bernd Steffensen (Dep. Social Sciences)
<b>1.6</b>	<b>Additional Instructor</b> ---
<b>1.7</b>	<b>Study Program</b> Master / all majors
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>This course provides an introduction to the topic of ethics in engineering with a special focus on challenges provide by ecological requirements. Future developments and the well-being of the world society will dependent on technical solutions. The development and the application of technical artifacts has numerous impacts beyond pure functioning. Therefore the course will cover the areas:</p> <ul style="list-style-type: none"> <li>- Why engineering ethics?</li> <li>- Engineering and Responsibility</li> <li>- A Matter of Moral</li> <li>- Individual Moral and the Organizational Context</li> <li>- Honesty, Integrity, and Reliability</li> <li>- Safety, Risk, and Liability</li> <li>- Solving Ethical Problems</li> <li>- Engineering and Environment</li> <li>- Ethics, Competing Values, and Stakeholders</li> <li>- Professionalism</li> </ul>

<p><b>3</b></p>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- the importance of ethics in engineering</li> <li>- the basic philosophical concepts of an applied ethic</li> <li>- the competing, nevertheless, appropriate values of various stakeholder in society</li> <li>- the future impact of Sustainable Development Goals (SDGs) and environmental concerns for engineering in general and firms in particular.</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- theories and methods to identify ethical issues in real world situations.</li> <li>- theories and methods to develop an individual position and to argue accordingly</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- ethical reasoning to various contexts in the workplace and the fields of individual engagement in the civil society.</li> </ul>
<p><b>4</b></p>	<p><b>Course Organization and Structure</b></p> <p>seminar (S)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>2,5 CP / 75 hours, including 28 hours (20 hours on a weekly base, 8 hours as a block course on a single day) 2 SWS seminar</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b></p> <ul style="list-style-type: none"> <li>- none</li> </ul> <p><b>Examination Type:</b></p> <ul style="list-style-type: none"> <li>- Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</li> </ul> <p><b>Examination Duration:</b></p> <ul style="list-style-type: none"> <li>- 90min</li> </ul>
<p><b>7</b></p>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<p><b>8</b></p>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<p><b>9</b></p>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<p><b>10</b></p>	<p><b>Applicability /Utilization</b></p> <p>All majors</p>

<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"><li>- Harris, Ch.E., Jr./Pritchard, M.S./James, R.W./Englehardt, E.E./Rabins, M.J. (2019): Engineering Ethics, Concepts and Cases, Cengage, Boston</li></ul> <p>On the learning platform operated by the Hochschule Darmstadt, an updated course is created for each semester, in which literature references are given and the necessary material is provided as far as possible.</p>

**MGwp04      Legal English for Engineers**

<b>1</b>	<b>Module Name</b> Legal English for Engineers
<b>1.1</b>	<b>Module Identifier</b> MGwp04
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Legal English for Engineers
<b>1.4</b>	<b>Semester</b> Summer or winter term
<b>1.5</b>	<b>Module Responsible and Instructor</b> Dr. Tamara Onnis (Language Center Coordinator of Legal English)
<b>1.6</b>	<b>Additional Instructors</b> ---
<b>1.7</b>	<b>Study Program</b> Master / all majors
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>This course provides an introduction to the topic Legal English for Engineers.</p> <p>It includes:</p> <p><b>Legal aspects of doing business</b></p> <ul style="list-style-type: none"> <li>• Right and responsibilities of manufacturers under contracts</li> <li>• General and specific Liabilities issues in Industry agreements</li> <li>• Patents, design rights copyrights (Including international licensing law)</li> </ul> <p><b>Contracts</b></p> <ul style="list-style-type: none"> <li>• Types of legal Agreements</li> <li>• Reading and understanding service agreements and manufacturing contracts</li> <li>• Legal jargons for technicians</li> </ul> <p><b>Safety and security</b></p> <ul style="list-style-type: none"> <li>• Management processes, requirements and regulations</li> </ul>

	<ul style="list-style-type: none"> <li>• Current and future legal framework (of eg. autonomous driving and vehicle design) in European countries and North America</li> <li>• Legal responsibilities             <ol style="list-style-type: none"> <li>1. Government,</li> <li>2. Manufacturer</li> <li>3. Consumer</li> </ol> </li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p>This course will help students develop both a theoretical and practical understanding of legal English in an Engineering context.</p> <p><b>to know:</b></p> <ul style="list-style-type: none"> <li>• How to read, analyze and conform to legal framework and requirements</li> </ul> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>• How to understand basic and technical legal agreements as they relate to the field of Engineering</li> </ul> <p><b>to apply :</b></p> <ul style="list-style-type: none"> <li>• How to utilize legal jargons and terminology in spoken and written form in practice</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>• How to be able to transfer legal knowledge in daily tasks and services.</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>The course is structured as a seminar either in block form or on a weekly basis. It is based on lectures, projects, exercises and group work.</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>2.5 CP, including 34 hours classroom teaching and 41 hours independent learning 2SWS V</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p>Possible changes to the examination modalities may be communicated upon start of the module.</p> <p><b>Examination Prerequisites:</b></p> <p>In order to write the end-of term exam, it is required to successfully attend minimum 75%/ of all class, successfully participate in class exercises and carry out a presentation.</p> <p>Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- presentation</li> <li>- exercises</li> <li>- attending classes</li> <li>- group work</li> <li>- projects</li> </ul> <p><b>Examination Type:</b></p> <ul style="list-style-type: none"> <li>• Written exam 50%</li> <li>• presentation 30%</li> <li>• homework/assignments/participation 20%</li> </ul>

	<b>Examination Duration:</b> <ul style="list-style-type: none"><li>• 90 Minutes</li></ul>
<b>7</b>	<b>Necessary Prerequisites</b> None
<b>8</b>	<b>Duration and Frequency of Course</b> see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)
<b>10</b>	<b>Applicability /Utilization</b> All majors
<b>11</b>	<b>Literature</b> Learning material will be provided during the course.

# **Electrical Engineering and Information Technology - international**

**Master of Science**

**Major Automation - mandatory**

**MA01 Safety in Industrial Automation**

<b>1</b>	<b>Module Name</b> Safety in Industrial Automation
<b>1.1</b>	<b>Module Identifier</b> MA01
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Safety in Industrial Automation – Lecture Safety in Industrial Automation - Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr.. Simons
<b>1.6</b>	<b>Additional Instructors</b> ---
<b>1.7</b>	<b>Study Program</b> Master / Major Automation
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Content of course “Safety in Industrial Automation - Lecture”:</b> Participants will be exposed to and gain working experience to design, implement, verify and validate safe systems in industrial automation. The course will cover</p> <ul style="list-style-type: none"> <li>- Introduction to safety systems in industrial automation</li> <li>- Basic terminology and standards concerning safety in industrial automation</li> <li>- Design of safe control systems</li> <li>- Measures to achieve safe processes and safe products incl. overview of safety devices</li> <li>- Development of safety related software using safety PLCs: configuration &amp; programming of safety PLCs</li> <li>- Verification &amp; validation of safety measures in accordance to a standard, e.g. EN ISO 13849</li> </ul> <p><b>Content of course “Safety in Industrial Automation - Lab”:</b> Practical design and programming of safety programs using safety PLCs and practical verification of safety in accordance to a standard are part of this course:</p> <ul style="list-style-type: none"> <li>- Hardware configuration of safety PLCs</li> </ul>

	<ul style="list-style-type: none"> <li>- Design, implementation, testing and debugging of a safety program using a safety PLC</li> <li>- Calculating the safety level required, e.g. performance level required in accordance to EN ISO 13849</li> <li>- Verification of safety systems e.g. by calculating the performance level achieved in accordance to EN ISO 13849</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- the basics of safety in industrial automation</li> <li>- the basic standards and the terminology for safe systems in industrial automation</li> <li>- the different concepts to achieve safe systems</li> <li>- the structure of safety systems</li> <li>- the verification and validation process for safe systems</li> </ul> <p><b>to apply the gained knowledge:</b></p> <ul style="list-style-type: none"> <li>- to design safe control systems, i.e. to design the safety concept, to select meaningful safety devices, to implement the hardware of the system including where to place the safety devices and the electrical connection</li> <li>- to develop safety related software using safety PLCs including the hardware configuration, the programming, the testing and the debugging</li> <li>- to verify and validate safe systems in industrial automation in accordance to a standard, e.g. EN ISO 13849</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the acquired knowledge to create, verify and validate safe systems in industrial automation.</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V / 0,5 (1) SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending Lab</li> <li>- Lab Progress</li> </ul> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes.</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>Participation in the preliminary course if no programming knowledge of Siemens S7 PLCs is available.</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>

<b>9</b>	<b>Duration and Frequency of Course</b> This module takes one semester and is offered once a year (see appendix 1 BBPO).
<b>10</b>	<b>Applicability /Utilization</b> This module is applicable for the major Automation.
<b>11</b>	<b>Literature</b> The following literature material will be provided:  - Electronic lecture notes (excerpt of slides) - Workbook for the lab  Further literature recommendations will be provided during the lecture.

**MA02 Adaptive Control, Modeling and Identification**

<b>1</b>	<b>Module Name</b> Adaptive Control, Modeling, and Identification
<b>1.1</b>	<b>Module Identifier</b> MA02
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Adaptive Control, Modeling, and Identification – Lecture Adaptive Control, Modeling, and Identification – Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Kleinmann
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Weigl-Seitz
<b>1.7</b>	<b>Study Program</b> Master / Major Automation
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>The course covers the areas:</p> <ul style="list-style-type: none"> <li>- Introduction to and classification of Adaptive Control Systems</li> <li>- Adaptation of Optimal Controllers and Controller Design by Pole Placement</li> <li>- Dynamic Behavior of Adaptive Control Loops and Configuration Issues</li> <li>- Modeling of Linear and Non-linear Time-invariant and -variant Dynamic Systems</li> <li>- Algorithms and Filters for Online Process Identification</li> <li>- Neural Networks as Memory Blocks for Controller and Process Model in Learning Control Loops</li> <li>- Computer based applications using Matlab/Simulink</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p>to understand:</p> <ul style="list-style-type: none"> <li>- the basic applications, concepts, components and challenges of adaptive control loops</li> <li>- the basic principles for modeling and identification of complex dynamic systems</li> </ul>

	<p><b>to apply the knowledge:</b></p> <ul style="list-style-type: none"> <li>- to classify a control application and select an appropriate approach for adaptive control</li> <li>- to know the advantages and disadvantages of modeling and identification algorithms and structures</li> <li>- to implement and simulate the components of an adaptive control loop</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the design process of adaptive control systems to problems from various domains in automation</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>Lecture (V) / Laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V and 0,5 (1) SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>• Attending Lab</li> <li>• Lab Progress</li> </ul> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes.</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Automation and for the major embedded systems and microelectronics.</p>

**11 Literature**

The following literature material will be provided:

- Electronic Script (excerpt of slides)
- Workbook for the lab

Further literature recommendations will be provided during the lecture.

**MA03 Computer Vision**

<b>1</b>	<b>Module Name</b> Computer Vision
<b>1.1</b>	<b>Module Identifier</b> MA03
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Computer Vision Computer Vision Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Nesper
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Neubecker
<b>1.7</b>	<b>Study Program</b> Master / Major Automation
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> <ul style="list-style-type: none"> <li>- Image Sensors</li> <li>- Image formation and digital images</li> <li>- 3D Sensors and point clouds</li> <li>- Image enhancement</li> <li>- Object recognition techniques</li> <li>- Pattern classification</li> <li>- Camera calibration</li> <li>- Stereo vision techniques and algorithms</li> <li>- Case studies of selected imaging solutions for Automation, Robotics and Industrial Image Processing</li> </ul>

	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- the mathematical and theoretical foundations of image processing and computer vision</li> <li>- the basic components and working principles of 2D- and 3D-Machine Vision Systems</li> <li>- the difference between image and point cloud based approaches to vision problems and their areas of application.</li> <li>- the uses and limitations of computer vision through practical case studies</li> </ul> <p><b>to apply the knowledge:</b></p> <ul style="list-style-type: none"> <li>- to know the advantages and disadvantages of different imaging sensors</li> <li>- to select appropriate hardware components for a given imaging scenario</li> <li>- to identify a suitable chain of algorithms for a given imaging problems</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the knowledge acquired in the lectures to new vision problems in Robotics, Automation and Production.</li> </ul>
	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V and 0,5 (1) SWS L</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>• Attending Lab</li> <li>• Lab Progress</li> </ul> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes.</p>
<p><b>7</b></p>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<p><b>8</b></p>	<p><b>Recommended Prerequisites</b></p> <p>Linear Algebra, Matlab</p>
<p><b>9</b></p>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>

<b>10</b>	<b>Applicability /Utilization</b>  This module is applicable for the major Automation and for the major Embedded Systems and Microelectronics.
<b>11</b>	<b>Literature</b>  - Hartley, Zissermann: Multiple View Geometry - Steeger Ulrich Widemann: Machine Vision Algorithms and Applications - Burger, Burge: Digital Image Processing  Further literature recommendations will be provided during the lecture.

**MA04            Advanced Programming Techniques**

<b>1</b>	<p><b>Module Name</b></p> <p>Advanced Programming Techniques</p>
<b>1.1</b>	<p><b>Module Identifier</b></p> <p>MM01 / MA04</p>
<b>1.2</b>	<p><b>Module Type</b></p> <p>Mandatory</p>
<b>1.3</b>	<p><b>Course Names</b></p> <p>Advanced programming Techniques - Lecture Advanced programming Techniques - Lab</p>
<b>1.4</b>	<p><b>Semester</b></p> <p>1 or 2 (winter term)</p>
<b>1.5</b>	<p><b>Module Responsible and Instructor</b></p> <p>Prof. Dr. Lipp</p>
<b>1.6</b>	<p><b>Additional Instructors</b></p> <p>Prof. Dr. Fromm, Prof. Dr. Bürgy</p>
<b>1.7</b>	<p><b>Study Program</b></p> <p>Master / Major Embedded Systems and Microelectronics Master / Major Automation</p>
<b>1.8</b>	<p><b>Teaching Language</b></p> <p>English</p>
<b>2</b>	<p><b>Module Content</b></p> <p style="padding-left: 40px;"><b>Content of course “Advanced Programming Techniques”</b></p> <p style="padding-left: 40px;">Review of fundamental concepts of a widely used object oriented programming language. The course will cover</p> <ul style="list-style-type: none"> <li>- introduction to the UML</li> <li>- OOA and OOD techniques</li> <li>- class design and class relations in C++,</li> <li>- C++ operator overloading,</li> <li>- advanced data structures, design patterns and algorithms</li> <li>- systematic test techniques</li> </ul> <p style="padding-left: 40px;">Design aspects like modularity and software re-use will be discussed. Developing software designs using the UML and CASE tools as well as extensive hands-on programming assignments in C/C++ are an integral part of the course.</p>

<p><b>3</b></p>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- the fundamentals of professional software design</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- the C++ programming language</li> <li>- the UML diagrams</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the design patterns and concepts to more complex architectures</li> </ul>
<p><b>4</b></p>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 2 SWS V and 2 SWS L</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- attending Lab</li> <li>- code walkthrough during the lab</li> </ul> <p>20% of the module grades are obtained by the laboratory during the term.</p> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes</p>
<p><b>7</b></p>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<p><b>8</b></p>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<p><b>9</b></p>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<p><b>10</b></p>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Automation and for the major Embedded Systems and Microelectronics.</p>

**11 Literature**

The following literature material will be provided:

- Electronic lecture notes
- Workbook for the lab

Further literature recommendations will be provided during the lecture.

**MA05 Industry 4.0/IIoT and the Digital Factory**

<b>1</b>	<b>Module Name</b> Industry 4.0/IIoT and the Digital Factory
<b>1.1</b>	<b>Module Identifier</b> MA05
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Industry 4.0/IIoT and the Digital Factory – Lecture Industry 4.0/IIoT and the Digital Factory - Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (summer term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Simons
<b>1.6</b>	<b>Additional Instructors</b> ---
<b>1.7</b>	<b>Study Program</b> Master / Major Automation
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Content of course “Industry 4.0/IIoT and the Digital Factory”:</b> Participants will be exposed to and gain working experience to design, implement, verify and validate safe systems in industrial automation. The course will cover</p> <ul style="list-style-type: none"> <li>- Goals and Key technologies for modern production</li> <li>- Basics of Industrie 4.0, IoT and Digital transformation, Structures of modern production</li> <li>- Product identification systems</li> <li>- Data acquisition and exchange, e.g. OPC UA</li> <li>- Product lifecycle management and product data management (PLM / PDM)</li> <li>- Simulation systems (HIL/SIL, virtual commissioning, material flow and energy consumption simulation)</li> <li>- Remote control</li> <li>- Security and safety in industrial automation</li> <li>- Manufacturing execution systems (MES)</li> <li>- Enterprise resource planning systems (ERP)</li> <li>- Assistance systems, e.g. using mixed reality</li> </ul>

	- Cloud computing including e.g. IoT hubs, cloud services
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- the goals and key technologies of the digital transformation</li> <li>- the structure of modern production</li> <li>- the possibilities, the advantages and the challenges of digitalized production</li> <li>- the basics of security for digitalized companies</li> <li>- the basics of MES, ERP, PLM/PDM, Assistance systems and cloud computing</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- implementing appropriate product identification systems</li> <li>- using simulation systems for virtual commissioning</li> <li>- developing ideas for new business processes of digitalized production companies</li> </ul> <p><b>to transfer:</b></p> <p>Students shall be able to play a significant role in the digital transformation of companies, by being able</p> <ul style="list-style-type: none"> <li>- to give impulses and develop scenarios for the digitalization of production companies</li> <li>- to choose appropriate information technologies, to judge about the advantages and challenges of these technologies and</li> <li>- to implement the communication between the information technology and the control system.</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V and 0,5 (1) SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b></p> <p>In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>• Attending Lab</li> <li>• Lab Progress</li> </ul> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes.</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>

<b>10</b>	<b>Applicability /Utilization</b> This module is applicable for the major Automation.
<b>11</b>	<b>Literature</b> The following literature material will be provided:  - Electronic Script (excerpt of slides) - Workbook for the lab  Further literature recommendations will be provided during the lecture.

**MA06 Industrial Robotics**

<b>1</b>	<b>Module Name</b> Industrial Robotics
<b>1.1</b>	<b>Module Identifier</b> MA06
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Industrial Robotics – Lecture Industrial Robotics – Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (summer term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Dr. Koch
<b>1.6</b>	<b>Additional Instructors</b>
<b>1.7</b>	<b>Study Program</b> Master / Major Automation
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> <p>The course covers the areas:</p> <ul style="list-style-type: none"> <li>- Overview on Applications, Systems and Technologies of Industrial Robotic Systems</li> <li>- Kinematic and Kinetic Models for Industrial Robots</li> <li>- Path Planning and Control Algorithms for Industrial Robots</li> <li>- Integration of Sensors and Multimodal Servoing</li> <li>- Force Control and Human-Robot Collaboration</li> <li>- Technological Aspects (e.g., Accuracy, Safety issues, Energy consumption)</li> </ul>
<b>3</b>	<b>Learning Outcome / Competencies</b> <b>to understand:</b> <ul style="list-style-type: none"> <li>- the basic applications, systems, and technologies of industrial robotic systems</li> <li>- the basic principles for the design of a robotic system with regard to a specific task</li> </ul>

	<p><b>to apply the knowledge:</b></p> <ul style="list-style-type: none"> <li>- to classify robotic applications and describe the necessary system architecture</li> <li>- to know and simulate the fundamental models and algorithms for industrial robots</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the control of 6-axis robots to new kinematics and cells with multiple arms</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>Lecture (V) / Laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V and 0,5 (1) SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. **MAwp02 High Level Language Frameworks**

<b>1</b>	<b>Module Name</b> High Level Language Frameworks
<b>1.1</b>	<b>Module Identifier</b> MAwp02
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> --
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Lipp
<b>1.6</b>	<b>Additional Instructors</b>
<b>1.7</b>	<b>Study Program</b> Master / Major Automation
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> Participants will be introduced to the development of graphical applications using Android and JAVA. The course will cover - JAVA language basics - Threads and synchronization - Framework tools, f.ex. from Android - Graphical user interfaces Practical programming assignments in JAVA and Android will be part of the course.
<b>3</b>	<b>Learning Outcome / Competencies</b> <b>to understand:</b> - the JAVA language - threads - GUI Design - events

	<p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- high level language, threading and events</li> <li>- interface definitions of a corresponding framework by implementing a small applications using Android.</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab.</p> <p>3 SWS V/ 1 SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by lab exercises.</p> <p><b>Examination type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>Basic programming skills.</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>Object oriented programming.</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Automation. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Electronic lecture notes</li> <li>- Workbook for the lab</li> </ul> <p>Further literature recommendations will be provided during the lecture.</p>

**MAwp03 Human Machine Interfaces (HMI)**

<b>1</b>	<b>Module Name</b> Human Machine Interfaces (HMI)
<b>1.1</b>	<b>Module Identifier</b> MAwp03
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Human Machine Interfaces - lecture Human Machine Interfaces - laboratory
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Bürgy
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr.. Wirth
<b>1.7</b>	<b>Study Program</b> Master / Major Automation
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> <ul style="list-style-type: none"> <li>• Human senses</li> <li>• Human perception</li> <li>• Interaction channels between humans and machines</li> <li>• General design aspects</li> <li>• Modeling of user interaction (UML-based architecture design)</li> <li>• Usability / user experience</li> <li>• Machine interfaces (widgets, IO, WIMP and post-WIMP interfaces)</li> <li>• Testing (software, user and field tests)</li> </ul>
<b>3</b>	<b>Learning Outcome / Competencies</b> <b>to know:</b> <ul style="list-style-type: none"> <li>• relevant definitions</li> <li>• design guidelines</li> </ul>

	<p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>• mechanisms of human senses</li> <li>• capabilities and restrictions of human perception</li> <li>• foundation of user experience</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>• usability aspects for designing user interaction with machines</li> <li>• selecting the right interface mechanisms and SW/HW interfaces</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>• modeling techniques, especially UML-based interface definition and documentation</li> <li>• choosing the right interface templates for human machine interaction</li> <li>• adapting interaction principles to multi-modal human machine interaction</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>2,5 CP / 75 hours in total, including 28 hours classroom teaching and lab. 2 SWS V</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Laboratory Workbook</li> <li>- Attending Lab</li> </ul> <p><b>Examination Type:</b> continuous project covering the complete content of the module with a final presentation at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 15 minutes presentation.</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>Advanced Programming Techniques (MA04)</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<b>10</b>	<p><b>Applicability / Utilization</b></p> <p>All (software) design tasks; software and hardware architectures; mechatronics, WING. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.</p>

## **Major Automation – general electives / electives from other majors**

MGwp01	Research Project
MGwp02	Selected Research Topics
MGwp03	Ethics, Engineering, and Ecology
MCwp01	Digital Signal Processing Applications
MCwp02	Wireless Systems (Technologies)
MCwp03	Network Security
MCwp04	Mobile Communications
MCwp05	Optical Communications
MCwp06	(I)IoT and Cloud Networking
MCwp08	Image and Video Processing
MMwp02	Safety in Embedded Control Systems
MMwp04	Advanced Software Design Techniques
MMwp05	Security in Connected Embedded Systems
MMwp07	Advanced Driver Assistance Systems and Automated Driving
MPwp02	Automotive Electrical Power Train
MPwp03	Stationary & Mobile Energy Storage Systems
MPwp05	Switch Gear
MPwp06	Power Systems Planning
MPwp09	Hydrogen Technique and Fuel Cells

# **Module Handbook**

## **Electrical Engineering and Information Technology - international**

**Master of Science**

**Major Communications - mandatory**

**MC01      Advanced Digital Signal Processing**

<b>1</b>	<b>Module Name</b> Advanced Digital Signal Processing
<b>1.1</b>	<b>Module Identifier</b> MC01
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Advanced Digital Signal Processing – Lecture Advanced Digital Signal Processing - Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Krauß
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Schultheiß, Prof. Dr. Wirth
<b>1.7</b>	<b>Study Program</b> Master / Major Communications
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Content of “Advanced Digital Signal Processing – Lecture”:</b> The course will cover</p> <ul style="list-style-type: none"> <li>• Discrete-time signal transforms (e.g. discrete-time Fourier transform, z-transform, DFT/FFT, DCT)</li> <li>• Principles and methods of digital filter design (IIR and FIR filters)</li> <li>• Implementation aspects of digital filters</li> <li>• Multi-rate systems (interpolation, decimation, sampling rate conversion) and filter banks</li> <li>• Adaptive digital systems</li> <li>• Spectral estimation methods</li> </ul> <p><b>Content of “Advanced Digital Signal Processing – Lab”:</b> The lab exercises cover</p> <ul style="list-style-type: none"> <li>• Discrete-time signal transforms</li> <li>• Digital filter design and implementation</li> <li>• Multi-rate systems</li> <li>• Adaptive digital systems</li> </ul>

<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- Principles of advanced digital signal processing methods</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- Design, implement and evaluate digital filters for different scenarios</li> <li>- Design and evaluate adaptive digital systems</li> <li>- Apply concepts of multi-rate systems and filter banks</li> <li>- Spectral estimation</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- Apply and evaluate discrete-time signal transforms for various requirements</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / lab (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V / 0.5 (1) SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending lab</li> <li>- Lab progress</li> </ul> <p><b>Examination Type:</b> Written exam or oral exam (will be communicated upon start of the module) covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> Written exam: 90 minutes, oral exam: 30 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>basic knowledge in digital signal processing from bachelor studies</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for major Communications.</p>

**11 Literature**

The following literature material will be provided:

- Electronic lecture notes

Further literature recommendations will be provided during the lecture.

**MC02      Advanced Modulation**

<b>1</b>	<p><b>Module Name</b></p> <p>Advanced Modulation</p>
<b>1.1</b>	<p><b>Module Identifier</b></p> <p>MC02</p>
<b>1.2</b>	<p><b>Module Type</b></p> <p>Mandatory</p>
<b>1.3</b>	<p><b>Course Names</b></p> <p>Advanced Modulation – Lecture Advanced Modulation – Lab</p>
<b>1.4</b>	<p><b>Semester</b></p> <p>1 or 2 (summer term)</p>
<b>1.5</b>	<p><b>Module Responsible and Instructor</b></p> <p>Prof. Dr. Kuhn</p>
<b>1.6</b>	<p><b>Additional Instructors</b></p> <p>---</p>
<b>1.7</b>	<p><b>Study Program</b></p> <p>Master / Major Communications</p>
<b>1.8</b>	<p><b>Teaching Language</b></p> <p>English</p>
<b>2</b>	<p><b>Module Content</b></p> <p>Content of course “Advanced Modulation - Lecture” Participants will be exposed to and gain working experience with advanced modulation schemes, multiple antenna transmitters and receivers, parameter and synchronization techniques, and channel coding schemes. The course will cover</p> <ul style="list-style-type: none"> <li>-                   Detection and estimation of parameters in white Gaussian noise</li> <li>-                   Multicarrier modulation</li> <li>-                   OFDM</li> <li>-                   Vector coding</li> <li>-                   Synchronization and parameter estimation</li> <li>-                   Capacity of wireless channels</li> <li>-                   Water-filling optimization</li> <li>-                   Multi-antenna systems (SIMO, MISO, MIMO)</li> </ul> <p>Content of course “Advanced Modulation - Lab” Lab exercises with Matlab and software-defined radio (SDR) modules will cover</p>

	<ul style="list-style-type: none"> <li>- Implementation of transmitter and receiver (QAM and OFDM)</li> <li>- Channel capacity and waterfilling optimization</li> </ul> <p>Multi-antenna systems</p>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- the concepts of estimation theory</li> <li>- the difference between various multicarrier schemes (advantages/problems)</li> <li>- the channel capacity of MIMO and multicarrier systems</li> <li>- multi-antenna concepts</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- the gained knowledge to design, implement, and evaluate multicarrier transmitters and receivers</li> <li>- the gained knowledge to calculate the channel capacity of frequency-flat and frequency-selective channels</li> <li>- the concept of waterfilling (margin-adaptive and rate-adaptive)</li> <li>- peak-to-average-power reduction techniques</li> <li>- the gained knowledge to define the parameters of OFDM systems (e.g. pilot patterns, cyclic prefix length, subcarrier spacing, etc.)</li> <li>- multiple-antenna schemes</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the concepts of optimization approaches to similar parameter estimation, detection, and synchronization problems in communications</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / lab (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V / 0.5 (1) SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending Lab</li> <li>- Lab Progress</li> <li>- Completion of lab preparation tasks</li> </ul> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>

<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Communications.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Electronic lecture notes</li> <li>- Workbook for the lab</li> </ul> <p>Further literature recommendations will be provided during the lecture and are listed in the lecture notes.</p>

**MC03 Microwave Components and Systems**

<b>1</b>	<b>Module Name</b> Microwave Components and Systems
<b>1.1</b>	<b>Module Identifier</b> MC03
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Microwave Components and Systems – Lecture Microwave Components and Systems - Laboratory
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Gaspard
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Schmiedel
<b>1.7</b>	<b>Study Program</b> Master / Major Communications
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Content of course „Microwave Components and Systems – Lecture“:</b></p> <ol style="list-style-type: none"> <li>1. Components: <ul style="list-style-type: none"> <li>- Transmission lines and waveguides</li> <li>- Microwave network analysis</li> <li>- Power dividers and directional couplers</li> <li>- Microwave filters</li> </ul> </li> <li>2. Systems: <ul style="list-style-type: none"> <li>- Noise and nonlinear distortion</li> <li>- Systems aspects of antennas and wireless communications</li> <li>- Synthesizers and mixers</li> <li>- Receiver architectures</li> </ul> </li> </ol> <p><b>Content of course “Microwave Components and Systems – Lab”:</b> Gaining in depth practical measurement experiences in RF and microwaves in chosen topics of the lecture</p>

<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b> design principles and key components of RF and microwave systems  <b>to apply:</b> methods to analyze, develop and test of RF and microwave components and systems  <b>to transfer:</b> the concepts of noise and nonlinear distortion to more complex systems; testing of complex microwave systems by modern measurement equipment (e.g. network analyzers)</p>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab.  3 SWS V / 0,5 (1) L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b>  In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending laboratory</li> <li>- Laboratory Progress</li> </ul> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Communications.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Electronic lecture notes</li> <li>- Description for the laboratory measurements</li> </ul> <p>Further literature recommendations will be provided during the lecture.</p>

**MC04      Advanced Software Design and Development**

<b>1</b>	<p><b>Module Name</b></p> <p>Advanced Software Design and Development</p>
<b>1.1</b>	<p><b>Module Identifier</b></p> <p>MC04</p>
<b>1.2</b>	<p><b>Module Type</b></p> <p>Mandatory</p>
<b>1.3</b>	<p><b>Course Names</b></p> <p>Advanced Software Design and Development - Lecture Advanced Software Design and Development - Lab</p>
<b>1.4</b>	<p><b>Semester</b></p> <p>1 or 2 (winter term)</p>
<b>1.5</b>	<p><b>Module Responsible and Instructor</b></p> <p>Prof. Dr. Wirth</p>
<b>1.6</b>	<p><b>Additional Instructors</b></p> <p>Prof. Dr. Krauß</p>
<b>1.7</b>	<p><b>Study Program</b></p> <p>Master / Major Communications</p>
<b>1.8</b>	<p><b>Teaching Language</b></p> <p>English</p>
<b>2</b>	<p><b>Module Content</b></p> <p>Object oriented programming applied to selected communication systems of medium level complexity, e.g. C++ and Matlab.</p> <p>The course will cover</p> <ul style="list-style-type: none"> <li>- introduction to selected examples of Application Programming Interfaces (APIs) and protocols commonly used in the field of communication;</li> <li>- introduction to and application of the UML, OOA and OOD techniques in order to design the communication systems using APIs and protocols;</li> <li>- introduction to and application of design patterns in order to implement the communication systems;</li> <li>- systematic test techniques.</li> </ul> <p>Requirements of the selected systems, technical basics of the APIs and protocols as well as the software techniques mentioned above are introduced and discussed during the lecture. The design of the example communication systems is jointly done during the lecture as well as in individual work or in teamwork. Hands-on programming is done individually in preparation of the labs and during the labs.</p>

<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b> technical principles of selected communication APIs and protocols, the principles of a good software design</p> <p><b>to apply:</b> object oriented programming in C++, using UML for design and documentation purposes</p> <p><b>to transfer:</b> general principles of using APIs and design patterns to other software systems</p>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p> <p><u>Media:</u> software development environment</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 2 SWS V / 2 SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending Lab</li> <li>- Lab Progress</li> <li>- Completion of lab preparation tasks</li> </ul> <p><b>Examination Type:</b> Practical exam on PC covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 120 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for all modules of the major Communications which include software topics (application/development).</p>

**11 Literature**

The following literature material will be provided:

- Electronic lecture notes
- Workbook for the lab

Further literature recommendations will be provided during the lecture.

**MC05 System-Driven Hardware Design**

<b>1</b>	<b>Module Name</b> System-Driven Hardware Design
<b>1.1</b>	<b>Module Identifier</b> MC05 / MM06 / MP07
<b>1.2</b>	<b>Module Type</b> mandatory
<b>1.3</b>	<b>Course Names</b> System Driven Hardware Design – Lecture System Driven Hardware Design - Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (summer term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Bannwarth
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Krauß, Prof. Dr. Kuhn
<b>1.7</b>	<b>Study Program</b> Master / Major Communications Master / Major Embedded Systems and Microelectronics
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Content of the course “System Driven Hardware Design – Lecture”</b> Participants will gain work experience in developing hardware and software of an electronic system. The course will cover:</p> <ul style="list-style-type: none"> <li>- Partitioning of a system in hardware, software parts and necessary peripherals components</li> <li>- interface design to peripheral components, to other systems and to humans</li> <li>- designing of a PCB, taking signal integrity, hardware and software test possibilities and production rules into account</li> <li>- software development for hardware test</li> <li>- view on mechanical constraints</li> <li>- production methods</li> </ul> <p><b>Content of the course “System Driven Hardware Design – Lab”</b> Development of a system consisting of software and hardware parts:</p> <ul style="list-style-type: none"> <li>- Developing a PCB</li> </ul>

	<ul style="list-style-type: none"> <li>- Soldering a PCB</li> <li>- test of hardware – software interaction</li> <li>- hardware and software start-up</li> <li>- debugging</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- system partitioning and interaction of software and hardware</li> <li>- the importance of designing for test of hardware and software</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- systematically developing a PCB</li> <li>- taking into account software and hardware testability during hardware design</li> <li>- layout rules for signal integrity and producibility</li> <li>- taking into account mechanical aspects of pcb development</li> <li>- software code to test software-hardware interaction</li> <li>- hardware debugging of serial interfaces</li> <li>- systematic start-up of a PCB consisting of hardware and software parts</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- design patterns and processes to other hardware-software-systems, consisting of different central processing units e.g. microcontrollers, fpgas, psocs or ASIC and peripheral components.</li> </ul>

<b>1.7</b>	<b>Study Program</b> Master / Major Communications
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Lecture:</b></p> <p>The goal of the module is to treat electromagnetic (EM) theory concepts in depth, which were used in a variety of applications in different communications engineering fields like microwave engineering, optical communications, electromagnetic compatibility, mobile and satellite communications, radar technology, antenna engineering etc. Students will be enabled to apply these concepts both theoretically and practically, e.g. by using simulation software systems (CST Microwave Studio, Sonnet, EZNEC, etc.) and measurement verification.</p> <p>The course consists of:</p> <ol style="list-style-type: none"> <li>1) A lecture part covering topics like Maxwell's equations, fields in different media, the wave equation and basic plane wave solution, plane wave reflection from a media interface, polarization, basic antenna concepts, transmission lines and waveguides, simulation methods, e.g. method of moments, etc.;</li> <li>2) A laboratory part where different state-of-the-art CAD (computer aided design) tools are applied to design and analysis of exemplary applications of the concepts covered in the lecture, e.g. <ul style="list-style-type: none"> <li>• Design and analysis of single element linear antennas and multiple element antennas with feeding networks or radiation coupled elements (e.g. Yagi antenna) by the use of e.g. EZNEC.</li> </ul> </li> </ol>

	<ul style="list-style-type: none"> <li>• Analysis of transmission lines and waveguides (RF and optical) with e.g. CST.</li> <li>• Design and analysis of microwave components: e.g. design &amp; analysis of couplers based on microstrip transmission lines by the aid of e.g. Sonnet.</li> <li>• Radiation by aperture antennas e.g. by CST.</li> <li>• Measurements and comparison with the numerical simulation results.</li> </ul> <p>Thus this course provides fundamental concepts for other courses in communications master program, e.g. for modules "Optical Communications", "Microwave Components and Systems", "Mobile Communications" and "Wireless Systems".</p> <p><b>Laboratory:</b></p> <ul style="list-style-type: none"> <li>• Simulations of the fields, waves and antennas by using numerical simulation programs;</li> <li>• Measurement of certain chosen antennas and comparison of the measurement results with the numerical results.</li> </ul>
3	<p><b>Learning Outcome / Competencies</b></p> <p><b>Knowledge:</b></p> <p>After successful completion of this module the student will be able to better understand EM phenomena and applications in order to analyze, design and characterize RF transmission lines and circuits of transmission lines, waveguides (both in spectral optical and microwave frequency ranges), and antennas.</p> <p><b>Skills:</b></p> <p>Capabilities to analyze the fields, wave guides and wave propagation problems and to design the antennas.</p> <p><b>Competences:</b></p> <p>Knowledge about and application of concepts of electromagnetic theory based on Maxwell's Equations in complete microwave and optical spectral range.</p> <p>Exemplary design and investigation of transmission line/waveguide and antenna structures by using different simulation software packages.</p>
4	<p><b>Course Organization and Structure</b></p> <p>lecture (V), laboratory (L)</p>
5	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V / 0.5 (1) SWS L</p>
6	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b></p> <p>In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending Lab</li> <li>- Lab Progress</li> </ul> <p><b>Examination Type:</b></p>

	<p>Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>Basic knowledge of fundamentals of communication technology of the Bachelor program.</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Communications.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Electronic Lecture Notes</li> <li>- Descriptions for the laboratory for numerical simulations or measurements</li> </ul> <p>Further literature recommendations will be provided during the lecture.</p>

**MC07 Information Networks**

<b>1</b>	<b>Module Name</b> Information Networks
<b>1.1</b>	<b>Module Identifier</b> MC07
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Information Networks-Lecture Information Networks-Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (summer term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Gerdes
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Chen

## **Module Handbook**

# **Electrical Engineering and Information Technology - international**

**Master of Science**

**Major Communications - electives**

**MCwp01 Digital Signal Processing Applications**

<b>1</b>	<b>Module Name</b> Digital Signal Processing Applications
<b>1.1</b>	<b>Module Identifier</b> MCwp01
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Digital Signal Processing Applications – Lecture
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Krauß
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Bannwarth
<b>1.7</b>	<b>Study Program</b> Master / Major Communications
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>The course will cover the following areas:</p> <p>Application of several digital signal processing techniques in the fields of communications, speech, audio and image processing (including medical imaging) based on e.g.</p> <ul style="list-style-type: none"> <li>• Multi-rate signal processing techniques and filter bank applications</li> <li>• Special transforms (e.g. Gabor transform, Wavelet transform, Radon transform)</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to know:</b></p> <ul style="list-style-type: none"> <li>- Special transforms and their application for different application domains</li> </ul> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- Multi-rate signal processing techniques and filter bank applications for different application domains</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- Capability to evaluate digital signal processing techniques in communications, speech and audio processing</li> </ul>

<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) with integrated exercises</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>2.5 CP / 75 hours in total, including 28 SWS hours classroom teaching. 2 SWS V</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> None</p> <p><b>Examination Type:</b> Written exam or oral exam (will be communicated upon start of the module) covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> Written exam: 60 minutes, oral exam: 30 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>Advanced Digital Signal Processing</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for major Communications. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided: - Electronic lecture notes</p> <p>Further literature recommendations will be provided during the lecture.</p>

**MCwp02 Wireless Systems (Technologies)**

<b>1</b>	<b>Module Name</b> Wireless Systems (Technologies)
<b>1.1</b>	<b>Module Identifier</b> MCwp02
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Wireless Systems – Lecture
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Gaspard
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Bannwarth, Prof. Dr. Chen, Prof. Dr. Krauß, Prof. Dr. Kuhn
<b>1.7</b>	<b>Study Program</b> Master / Major Communications
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>Content of course „Wireless Systems (Technologies) – Lecture“:</p> <ul style="list-style-type: none"> <li>- Basic principles: use cases, frequencies, propagation channels for wireless systems, modulation and coding principles, standardization bodies</li> <li>- Communication systems: short range devices, wireless local area and wide range network technologies</li> <li>- Broadcast systems: e.g. DVB and DAB, multi frequency and single frequency networks</li> <li>- Radar technologies for automotive and industrial applications</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>Knowledge:</b> use cases and application fields of different technologies  <b>Skills:</b> capability to evaluate and compare wireless systems with respect to their application and use cases  <b>Competences:</b> comparison, design, planning and dimensioning of wireless systems</p>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) with integrated exercises</p>

<b>5</b>	<p><b>Credits and Workload</b></p> <p>2,5 CP / 75 hours in total, including 28 SWS hours classroom teaching. 2 SWS V</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 60 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Communications.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Electronic lecture notes</li> </ul> <p>Further literature recommendations will be provided during the lecture.</p>

**MCwp03 Network Security**

<b>1</b>	<b>Module Name</b> Network Security
<b>1.1</b>	<b>Module Identifier</b> MCwp03
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Network Security – Lecture, Seminar, Demonstration Lab
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Chen
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Gerdes
<b>1.7</b>	<b>Study Program</b> Master / Major Communications
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> <b>Lecture:</b> <ul style="list-style-type: none"> <li>• Concept and functionalities of network security</li> <li>• Specific QoS and security requirements of the mission-critical real-time applications and broadband multimedia network technologies</li> <li>• Advanced network security technologies (Encryption, Digital Signature, Authentication, Firewall, VPN, Security Gateways etc.)</li> <li>• Network management systems TMN and SNMP</li> </ul> <b>Demo Lab during the lecture:</b> Demonstration Lab helps to better understand the above-mentioned security aspects and functionalities.
<b>3</b>	<b>Learning Outcome / Competencies</b> <b>Knowledge:</b> After completing the course, the student will be able to understand the basic network security aspects, QoS requirements, and to utilize network security gateways and network management systems.

	<p><b>Skills :</b> Capabilities to analyze the network security functionalities and requirements, and configure the network security gateways.</p> <p><b>Competences:</b> Evaluation and analysis of network and service requirements of different applications, and utilization and configuration of corresponding network security gateways solutions and network management systems.</p>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V), seminar, demonstration lab during the lecture and seminar</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>2.5 CP / 75 hours in total, including 28 hours classroom teaching. 2 SWS V</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> none</p> <p><b>Examination Type:</b> Written exam, oral exam, and/or presentation (will be communicated upon start of the module) covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> Written exam: 90 minutes, oral exam: 30 minutes, presentation: 15 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>Basic knowledge of fundamentals of communication technology of the Bachelor program.</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Communications. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.</p>

**11 Literature**

The following literature material will be provided:

- Electronic Lecture Notes
- Descriptions for the Demo lab

Further literature recommendations will be provided during the lecture.

**MCwp04 Mobile Communications**

<b>1</b>	<b>Module Name</b> Mobile Communications
<b>1.1</b>	<b>Module Identifier</b> MCwp04
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Mobile Communications
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Kuhn
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Chen, Prof. Dr. Gaspard, Prof. Dr. Krauß
<b>1.7</b>	<b>Study Program</b> Master / Major Communications
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> <b>Lecture:</b> <ul style="list-style-type: none"> <li>• Use-cases, applications of mobile Systems</li> <li>• Signals and signal propagation in mobile applications</li> <li>• Mobile channels</li> <li>• Multiplexing, modulation, spread spectrum, cellular system</li> <li>• Mobile communication systems (2G, 3G, 4G, 5G)</li> <li>• Basics of network planning</li> </ul>
<b>3</b>	<b>Learning Outcome / Competencies</b> <b>Knowledge:</b> <ul style="list-style-type: none"> <li>- the concepts of signal propagation</li> <li>- the concepts of mobile communication systems</li> <li>- the differences between different systems as well as their pro and cons.</li> </ul> <b>Skills:</b> <ul style="list-style-type: none"> <li>- network planning for simple use-cases</li> </ul>

	<p><b>Competences:</b></p> <ul style="list-style-type: none"> <li>- Evaluation and selection of appropriate system depending on application and use-case</li> <li>- Definition of relevant parameters</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>2.5 CP / 75 hours in total, including 28 hours classroom teaching. 2 SWS V</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> none</p> <p><b>Examination Type:</b> Written exam, oral exam, and/or presentation (will be communicated upon start of the module) covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> Written exam: 60 minutes, oral exam: 30 minutes, presentation: 15 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>Module Advanced Modulation</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>

<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> <p>This module provides an introduction to CMOS analog circuit design. It covers the areas</p> <ul style="list-style-type: none"> <li>- CMOS-technology,</li> <li>- MOS-transistors and passive components,</li> <li>- Integrated circuit layout,</li> <li>- CMOS device modelling (large signal and small signal), SPICE-simulation</li> <li>- Analog subcircuits: Switches, sinks/sources, current mirrors, references</li> <li>- CMOS amplifiers: single transistor amplifiers, differential amplifiers, cascode amplifiers</li> <li>- Operational amplifiers, OpAmps: Compensation, two-stage-architectures, cascode OpAmps)</li> <li>- Digital-analog and analog-digital converters (flash, sequential and oversampling converters)</li> </ul>
<b>3</b>	<b>Learning Outcome / Competencies</b> <p>Students should know after completion of this module the most important principles of CMOS process technology and basics of deep submicron device models</p> <p>They should understand the design flow for CMOS-analogue circuits, which differs qualitatively from the digital counterpart</p>

	<p>They should be able to apply the design recipes to develop analogue circuits according to given</p> <p>They should be able to transfer the design methods from this module to other fields of analogue design tasks</p> <p>After the completion of the module the student has all the relevant <b>skills</b> which are needed to design analog building blocks and integrated analog systems starting from a specification to a verified integrated circuit layout. Since the module covers complex design problems students <b>know</b> about the common mistakes made by beginning engineers. Design <b>competencies</b> are developed by taking the student step by step through the creation of real circuits.</p>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>The course is taught using classroom lectures (V) and lab classes (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3SWS V / 1 SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Laboratory Workbook</li> <li>- Attending Lab</li> </ul> <p>30% of the module grade are obtained by the laboratory / project during the term.</p> <p><b>Examination Type:</b> Written exam 90 minutes covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Embedded Systems and Microelectronics. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.</p>

<b>11</b>	<b>Literature</b> Slides for the lecture and lab instructions are available (Moodle)  Slides contain references for additional literature and online-material.

<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>Knowledge of microcontrollers</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Embedded Systems and Microelectronics. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Electronic lecture notes</li> <li>- Workbook for the lab</li> </ul> <p>Further literature recommendations will be provided during the lecture.</p>

**MMwp06 Digital Signal Processing Chain**

<b>1</b>	<b>Module Name</b> Digital Signal Processing Chain
<b>1.1</b>	<b>Module Identifier</b> MMwp06
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Digital Signal Processing Chain - Lecture
<b>1.4</b>	<b>Semester</b> WS or SS
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Hermann Meuth, Ph.D.
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Christian Jakob
<b>1.7</b>	<b>Study Program</b> Master / suitable for all Majors
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b>  The module is aimed at both a theoretical and a hardware design perspective of the entire signal processing chain and the interdependencies of hardware design parameters. Topics covered will be: Anti-aliasing and reconstruction filters, sampling (in time), bit quantization (in value), conversion and reconstruction, slew rate, sample and hold, over-sampling, under-sampling, precision of algorithms and respective errors and error propagation. Digital signal generation. CORDIC. Sigma-Delta-principles, noise shaping. Digital filter design principles. Digital control systems. Z-transform and bit-true representations in time and frequency domain. Actual hardware implementation schemes.
<b>3</b>	Participants will learn to specify and configure constituent components of modern signal processing systems, especially in regards to their interdependencies in performance and design parameters. The generic approach will leave room for various implementation and application schemes.  Having completed the course, participants will <ul style="list-style-type: none"> <li>- know the salient characteristics of the signal processing components</li> <li>- understand, how such components and the choice of their parameters will influence the performance of the entire chain</li> <li>- be able to apply such systems in various hardware schemes and to assess their usability</li> </ul>

	<ul style="list-style-type: none"> <li>- be able to transfer these competencies to various applications regardless of any details of hardware or processing technologies, as digital signal processing schemes are ubiquitous in modern electrical engineering and IT applications.</li> </ul>
<b>4</b>	<b>Course Organization and Structure</b> lecture (V) with a seminar component (Sem)
<b>5</b>	<b>Credits and Workload</b> 2,5 CP / 75 hours in total, including 28 hours classroom teaching. 2 SWS V
<b>6</b>	<b>Examination Modalities</b> Written exam at the end of the term. Possible changes to the examination modalities may be communicated upon start of the module.  70% of the module grade is based on the written exam and 30% on the seminar presentation.  <b>Examination Prerequisites:</b>  In order to write the end-of-term exam, each participant is required to have individually presented a seminar of ½ hour covering a subject related to the scope of the course.  <b>Examination Type:</b> Written paper-and-pencil open-book exam plus seminar presentation  <b>Examination Duration:</b> 90 Minutes
<b>7</b>	<b>Necessary Prerequisites</b> None
<b>8</b>	<b>Recommended Prerequisites</b> None
<b>9</b>	<b>Duration and Frequency of Course</b> see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)
<b>10</b>	<b>Applicability /Utilization</b> Due to the generic approach and philosophy, the module should be suitable for all majors.
<b>11</b>	<b>Literature</b> Course material: Tablet-based course transcripts

Texts:

Emmanuel C. Ifeakor, Barrie W. Jervis, Digital Signal Processing, a practical approach. Prentice.

Richard J. Higgins, Digital Signal Processing in VLSI, Prentice. Out of print, thus use of mimeographed excerpts.

Journals and patent disclosures:

Various current journal articles and reprint volumes.

**MMwp07 Advanced Driver Assistance Systems and Automated Driving**

<b>1</b>	<b>Module Name</b> Advanced Driver Assistance Systems and Automated Driving
<b>1.1</b>	<b>Module Identifier</b> MMwp07
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Advanced Driver Assistance Systems and Automated Driving – Lecture Advanced Driver Assistance Systems and Automated Driving – Laboratory
<b>1.4</b>	<b>Semester</b> Winter term (or summer term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Jens Hoffmann
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Peter Fromm and external lecturers.
<b>1.7</b>	<b>Study Program</b> Master / all majors
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> ADAS Lecture: <ul style="list-style-type: none"> <li>• Basics of driver assistance systems</li> <li>• Examples of ADAS functions (ACC, lateral guidance, front collision protection including automated emergency braking, navigation, automated driving, automated parking)</li> <li>• Development and test environments for driver assistance systems and validation methods</li> <li>• Legal regulations and functional safety</li> <li>• Sensor technology for driver assistance systems (ultrasonic, video, lidar, 3d TOF, radar and others)</li> <li>• Actuator technology for driver assistance systems</li> <li>• Basics and limits of driving dynamics</li> <li>• Human-machine interface (HMI)</li> <li>• Driver assistance at stabilization level</li> <li>• Driver assistance at guidance and navigation level</li> <li>• Future of driver assistance systems.</li> </ul> ADAS Lab:

	<ul style="list-style-type: none"> <li>• Development of a simplified ADAS function</li> <li>• Hazard and risk analysis</li> <li>• Definition of safety goals and safety requirements</li> <li>• Implementation of a simplified ADAS function in a model car</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p>The aim of the module is to provide students with the following levels of competence with regard to the knowledge and skills specified in each case.</p> <p>To know:</p> <ul style="list-style-type: none"> <li>• Students know the basics of driver assistance systems and automated driving, the associated technology with a particular focus on system understanding. They know various evaluation criteria for component selection, functional limits, sensors and actuators. Students have become familiar with the functional areas of existing systems through driving tests during demonstrations and trials.</li> </ul> <p>To understand:</p> <ul style="list-style-type: none"> <li>• Students understand the physical principles of the interrelationships of driver assistance systems with machine perception.</li> </ul> <p>To apply:</p> <ul style="list-style-type: none"> <li>• Students are able to design and construct systems and components for driver assistance systems.</li> <li>• To transfer: Students are able to transfer the technology is applicable for other ADAS</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>ADAS V3 ADAS L1</p> <p>The lecturer may stipulate compulsory attendance for the courses of the module. Use of changing media according to the possibilities available in the lecture hall, seminar room, laboratory room and vehicles.</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>ECTS-points: 5 150 h in total, 56 hours' classroom teaching</p> <p>ADAS Lecture: 3 SWS ADAS Lab: 1 SWS</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p>Possible changes to the examination modalities may be communicated upon start of the module.</p> <p><b>Examination Prerequisites:</b> In order to write the end-of term exam, it is required to successfully attend and finish the laboratory part Successful fulfillment of prerequisites is measured by: Laboratory report / presentation</p> <p><b>Examination Type:</b> Written exam</p> <p><b>Examination Duration:</b> 90 minutes</p>

7	<p><b>Necessary Prerequisites</b></p> <p>None</p>

## **Module Handbook**

# **Electrical Engineering and Information Technology - international**

**Master of Science**

**Major Power Engineering - mandatory**

**MP01      Advanced High Voltage Technology**

<b>1</b>	<b>Module Name</b> Advanced High Voltage Technology
<b>1.1</b>	<b>Module Identifier</b> MP01
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Advanced High Voltage Technology – Lecture Advanced High Voltage Technology – Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Betz
<b>1.6</b>	<b>Additional Instructors</b> ---
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Content of course „Advanced High Voltage Technology – Lecture“:</b> Participants will be exposed to and gain theoretical experience with high voltage systems for high AC and high DC voltages. The course will cover:</p> <ul style="list-style-type: none"> <li>- Introduction into HVAC and HVDC applications.</li> <li>- Short repetition of breakdown in gases, in solids and in liquids.</li> <li>- Electromagnetic field calculations and breakdown behavior influenced by homogeneous, quasi-homogeneous- and in-homogeneous arrangements and by polarity effect.</li> <li>- Dimensioning of high voltage components based on dimensioning rules of gases, solids and liquids. For identical technical requirements three different high voltage systems shall be dimensioned and compared critically: cable versus gas-insulated switchgear versus air-insulated switchgear. The aspects like size, weight and life time shall be taken into account.</li> <li>- Generation of high impulse voltages using a marx-generator: calculation of a 4 stage-design and evaluation of different methods to improve to an 8-stage-design.</li> <li>- Sources of over-voltages in networks and countermeasures like surge MO-surge arresters or additional lightning protection such as double-earth conductors on top of overhead lines.</li> </ul>

- Design and calculation of impulse-current test-circuits to test surge arresters.
- Measuring methods of impulse currents and their limitations.
- Partial discharge recognition in AC-systems to prevent failure occurrence in medium and high voltage components and systems. Use of phase-resolved-pattern-recognition of partial discharges to classify the failure source.
- Special challenge of detecting and interpretation of partial discharges in DC-systems. Students shall investigate partial discharge measuring methods in a self-contained literature study and present their results group-wise in the lecture. The effect and a detection solution are demonstrated afterwards within the high voltage lab.
- Development process based on the development steps of an gas-insulated switchgear (GIS) product. Main focus hereby is the patent disclosure process.

**Content of course „Advanced High Voltage Technology – Lab“:**

Participants will gain practical experience in the following topics:

Performing and measuring of impulse voltage and impulse current tests:

- Performing impulse voltage tests with an 800 kV-marx-generator.
- Measuring and comparison of impulse voltages provided by a compensated ohmic divider and a damped capacitive divider. Influence of the earthing network will be demonstrated. Students shall optimize the given earthing system. The gained measuring results shall be proven by calculation of the divider ratios based on the used components of the dividers.
- Calculation and performing of impulse current tests.

Performing and measuring of partial discharge measurements based on samples and real products

- Students shall built-up the partial discharge measuring system by their own.
- Calibration and check of ground noise of the partial discharge measuring system.
- Investigations on different samples and real products. Comparison and critical discussion of the measuring results.
- Interpretation of phase resolved pattern recognition and classification of failure sources.
- Introduction into the complex area of partial discharges at DC. Students will get publications about partial discharge effects at DC and shall prepare the physical background by themselves. Students getting familiar with phenomenon of DC-failure and difficulties of partial discharge measurement at DC-voltages.

**3 Learning Outcome / Competencies**

**to understand:**

- The functionality of high voltage AC and DC –systems.
- Influence of technical parameters which determine the dielectric, mechanical and thermal behavior of high voltage components and systems.
- Influence of geometry and polarity on the electromagnetic phenomenon.
- Specialties of an development process including patent disclosures

**to apply:**

- The gained knowledge to dimension high voltage components (cables, GIS, AIS).
- The dimensioning rules to calculate an impulse voltage generator.
- The dimensioning rules to calculate an impulse current generator
- To apply different methods for partial discharge measurements for AC and DC systems.
- To dimension suited surge arresters to limit over-voltages.

	<p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- To classify failure sources based on partial discharge measuring methods for AC and DC systems.</li> <li>- To change existing geometries to optimized geometries.</li> <li>- Measuring results can be adapted to other products taking the chain of tolerances into account.</li> <li>- To transfer life acceleration tests into real products like high voltage cables using solid insulations.</li> <li>- To transfer existing countermeasures (to prevent over-voltages) to other designs and applications.</li> </ul>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS V/0,5 (1) L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending and Documentation of the Lab</li> <li>- Lab progress</li> </ul> <p><b>Examination Type:</b> Written exam or presentation covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes (written exam), 20 minutes (presentation)</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>

<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Power Engineering and as elective course of master WING.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Electronic lecture notes</li> <li>- Workbook for the Lab</li> </ul> <p>Further literature recommendations will be provided during the lecture.</p>

**MP02 Power System Operation**

<b>1</b>	<b>Module Name</b> Power System Operation
<b>1.1</b>	<b>Module Identifier</b> MP02
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Power System Operation - Lecture Power System Operation - Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Graf
<b>1.6</b>	<b>Additional Instructors</b> ---
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>This course provides an introduction to professional power system operations including operational planning based on standard tools like SCADA and Training Systems. The course covers the theoretical side and explains the grid operations in real time on a training system using an industry standard control system. The lab covers fundamental concepts of power grid operations in real situations.</p> <p><b>Power System Operation – Lecture</b></p> <ul style="list-style-type: none"> <li>- Review of the relevant component models of power systems</li> <li>- Structure of power systems and Interaction of power system components in the system context</li> <li>- Architecture of control centers including information technology (RTU)</li> <li>- SCADA and EMS software functions in control centers</li> <li>- Strategies for operational planning and optimization</li> <li>- Significance and means of voltage and reactive power control</li> <li>- Power frequency control and power system stability</li> <li>- Power system faults and functions of protection relays</li> <li>- Strategies for clearing power system emergencies</li> </ul>

	<p><b>Power System Operation – Lab</b></p> <p>The participants will use a power system training simulator to get experience of basic operational tasks including normal operation and handling of disturbances.</p> <ul style="list-style-type: none"> <li>- Analyzing power system components and their interaction in the system context</li> <li>- Operational tasks during normal operation</li> <li>- Exploring component limits</li> <li>- Reactions of power system components during power system disturbances</li> <li>- Analyzing power system faults, operational tasks during emergencies</li> <li>- Control center operational handling in coordination with grid service staff</li> </ul>
<p><b>3</b></p>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- behavior of power system components in the system context</li> <li>- power system operational tasks and planning</li> <li>- voltage control and reactive power resources and demand</li> <li>- power frequency control and active power balance</li> <li>- fault clearing by protection devices</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- handling control center software (SCADA)</li> <li>- solving operational tasks in the training simulation</li> <li>- execute fault localization and service restoration on the training system</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- optimization of the system state by finding suitable control actions</li> <li>- assess the impact of renewable energy sources on the power system</li> <li>- do the master thesis with a utility company</li> </ul>
<p><b>4</b></p>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 3 SWS (V) / 0,5 (1) SWS L</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b></p> <p>In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Attending Lab</li> <li>- Lab report</li> </ul> <p>20% of the module grades are obtained by the laboratory during the term.</p> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p>

	<b>Examination Duration:</b> 90 minutes
<b>7</b>	<b>Necessary Prerequisites</b> None
<b>8</b>	<b>Recommended Prerequisites</b> - good knowledge of basic properties power and models of system components such as transformers, transmission lines and generators - good knowledge of circuit analysis methods
<b>9</b>	<b>Duration and Frequency of Course</b> This module takes one semester and is offered once a year (see appendix 1 BBPO).
<b>10</b>	<b>Applicability /Utilization</b> This module is applicable for the major Power Engineering.
<b>11</b>	<b>Literature</b> The lab lecture notes and further material are provided in electronic form.  Further literature recommendations will be provided during the lecture.

**MP03 Renewable Energy Systems**

<b>1</b>	<b>Module Name</b> Renewable Energy Systems
<b>1.1</b>	<b>Module Identifier</b> MP03
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Renewable Energy Systems - Lecture
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Glotzbach
<b>1.6</b>	<b>Additional Instructors</b>
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>Today's and future societies crucially rely on a secure, stable and uninterrupted energy supply. A key factor in this context represents the strategic expansion and integration of renewable energy systems in present and future energy systems. Besides providing students with up-to-date and advanced knowledge of renewable energy techniques and systems, the lecture also addresses contemporary and future challenges such as net-integration or the storage of electricity generated by fluctuating renewable power generation systems. In detail, the course covers the following subjects:</p> <ul style="list-style-type: none"> <li>- Analysis of current energy needs and future energy demands as well as the resulting environmental, social, social-economic and political implications.</li> <li>- Review of the basic physics used in RE studies (Energy fundamentals, heat transfer mechanisms, laws of thermodynamics, conservation of energy and momentum,).</li> <li>- Comparison to conventional energy systems (fossil fuels and nuclear energy) and their underlying conversion processes.</li> <li>- Fundamentals of renewable energy sources like solar radiation, wind-, geothermal power.</li> <li>- Use of solar power by solar thermal and solar thermal electricity systems</li> <li>- Power generation by photovoltaic, photovoltaic system design (stand-alone and grid connected systems), photovoltaic power electronics.</li> </ul>

	<ul style="list-style-type: none"> <li>- Wind energy resources, site analysis, wind energy conversion systems, onshore and offshore wind park design.</li> <li>- Besides the main topics of solar and wind energy conversion systems, the lecture addresses geothermal power systems, hydro and tidal power systems as well as biomass power systems.</li> <li>- The role of energy storage in renewable energy systems: Possible options and solutions: From pumped hydro storage up to power-to-gas technology.</li> <li>- Future outlook on renewable energy: Potentials and limitations, drivers and future challenges, policy and planning</li> <li>- Simulation of renewable energy systems</li> <li>- Economics of renewable energy systems</li> </ul>
<b>3</b>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b> The students understand the physical calculation and simulation methods of solar radiation. Furthermore, they understand the structure, the technology and the behavior of the treated regenerative power generation plants and of steam power plants.</p> <p><b>to apply:</b> The students apply calculation and simulation methods for the design of regenerative energy generation plants and steam power plants and can thus determine, for example, the energy yield.</p> <p><b>to transfer:</b> Application to new regenerative energy systems by calculation and simulation methods. In addition, students are qualified in planning and designing complex systems of different renewable energy systems.</p>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>lecture (V)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching. 4 SWS V</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> None</p> <p><b>Examination Type:</b> Written exam or presentation covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes (written exam), 20 minutes (presentation)</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>

<p><b>9</b></p>	<p><b>Duration and Frequency of Course</b></p> <p>This module takes one semester and is offered once a year (see appendix 1 BBPO).</p>
<p><b>10</b></p>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Power Engineering.</p>
<p><b>11</b></p>	<p><b>Literature</b></p> <p>The following literature material will be provided:</p> <ul style="list-style-type: none"> <li>- Volker Quaschnig: Under-standing Renewable Energy Systems</li> <li>- Kaltschmitt Martin: Renewable Energy Systems</li> </ul> <p>Further literature recommendations will be provided during the lecture.</p>

**MP04 Embedded Programming & Design of Real-Time Control Systems**

<b>1</b>	<b>Module Name</b> Embedded Programming & Design of Real-Time Control Systems
<b>1.1</b>	<b>Module Identifier</b> MP04
<b>1.2</b>	<b>Module Type</b> Mandatory
<b>1.3</b>	<b>Course Names</b> Embedded Programming & Design of Real-Time Control Systems – Lecture Embedded Programming & Design of Real-Time Control Systems – Lab
<b>1.4</b>	<b>Semester</b> 1 or 2 (winter term)
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Jakob
<b>1.6</b>	<b>Additional Instructors</b> ---
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Embedded Programming &amp; Design of Real-Time Control Systems - Lecture</b></p> <p>The aim of this course is to provide students with a solid background of embedded system fundamentals for the application in modern power electronic control systems. In particular, the course will cover</p> <ul style="list-style-type: none"> <li>- an introduction to real-time control systems for power electronic applications – Basic principles and typical application scenarios.</li> <li>- a review of basic control principles: design and analysis of closed loop control systems.</li> <li>- general embedded system attributes: Real-time capabilities, concurrency, responsiveness, reliability and fault handling, diagnostics and system-constraint metrics (costs, power consumption and performance).</li> <li>- the anatomy of state-of-the-art microcontroller systems: an introduction to the working principles of the CPU sub-system, internal memories as well as typical peripherals such as GPIOs, ADCs, Timers, PWM cores and communication interfaces.</li> <li>- the software development ecosystem for embedded control design: A short introduction to compilers, assemblers, linkers, loaders and debuggers.</li> </ul>

	<ul style="list-style-type: none"> <li>- the fundamentals of low-level, hardware-related programming in C.</li> <li>- the fundamentals of using fixed-point arithmetic's for digital signal processing.</li> <li>- interrupts and interrupt service routine concepts – state machine based program control and low-power design techniques.</li> <li>- an introduction to real-time operating systems: Basic principles, scheduling, inter-task communication and resource sharing.</li> <li>- Model based design techniques: automatic code generation for embedded control systems.</li> <li>- advanced <math>\mu</math>C solutions for digital power applications: Dedicated peripherals for optimizing digital control systems.</li> <li>- a design example: Digital control techniques for synchronous DC/DC buck converters.</li> </ul> <p><b>Embedded Signal Processing Systems - Lab</b></p> <p>The lab focuses on teaching practical skills related to programming of embedded systems using C:</p> <ul style="list-style-type: none"> <li>- Software design and interfacing of simple external components such as buttons, switches and LEDs.</li> <li>- Design and implementation of a simple interrupt driven digital control loop using peripherals such as ADCs, comparators or PWM units.</li> <li>- Model-based design of embedded control systems using high-level design, simulation and code generation tools for rapid prototyping, and hardware-in-the-loop testing.</li> </ul>
<p><b>3 Learning Outcome / Competencies</b></p>	<p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- the architectural features of state-of-the art microcontroller systems.</li> <li>- the basic operating principles as well as the interplay of microcontroller internal components.</li> <li>- the basic design patterns for designing interrupt based program control.</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- the gained knowledge to analyse and define the real-time requirements of a given application.</li> <li>- the gained knowledge to set-up and configure the microcontroller as well as its peripherals for the use in a dedicated application scenario.</li> <li>- the gained knowledge to map a given floating-point control algorithm to its fixed-point equivalent.</li> <li>- the gained knowledge to implement simple fixed-point control algorithms on state-of-the-art <math>\mu</math>C platforms.</li> <li>- the gained knowledge to evaluate the implementation results (e.g. timing, resource usage, power consumption) and correlate them with the corresponding high level design.</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- the patterns and methodologies to more complex power electronic control design scenarios in order to find optimal solutions with respect to system constraints such as costs, performance or power consumption.</li> </ul>
<p><b>4 Course Organization and Structure</b></p>	<p>lecture (V) / laboratory (L)</p>
<p><b>5 Credits and Workload</b></p>	<p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 2 SWS V / 2 SWS L</p>

**MPwp01 Lab Module on Power Electronics**

<b>1</b>	<b>Module Name</b> Lab Module on Power Electronics
<b>1.1</b>	<b>Module Identifier</b> MPwp01
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Lab-Module on Power Electronics - Lab
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Krontiris
<b>1.6</b>	<b>Additional Instructors</b> Prof. Dr. Weiner
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> The students should gain practical experience with regards to the contents of the corresponding theory modules on Power Electronics for Drives and Energy Systems. The students will carry out different lab experiments on power electronic systems and electrical drives with the measurement of the characteristic electrical, mechanical and other physical values. Each lab exercise is accompanied by a simulation exercise which includes the development of a simulation model. Each lab exercise will be completed with a lab report.
<b>3</b>	<b>Learning Outcome / Competencies</b> <b>to understand:</b> The students are able to carry out practical measurements on power electronic for drives and energy systems and model the analyzed system with a suitable simulation program. <b>to apply:</b> They are able to connect and operate the necessary measurement equipment (in particular power analyzer and digital oscilloscope) in order to get meaningful results. They can present the experiment and evaluate and compare (with regards to theory and simulation) the obtained results in a technical report. The students are thus able to test, describe and evaluate the function and behavior of power electronic for drives and energy systems by means of measurements.

	<p><b>to transfer:</b></p> <p>The students are able to define measured quantities and test set-up for the testing and evaluation of other power electronic and electric drives systems. They are able to specify the required measuring equipment. They are able to set-up and refine simulation models of practical systems.</p>
<b>4</b>	<p><b>Course Organization and Structure</b></p> <p>laboratory (L)</p>
<b>5</b>	<p><b>Credits and Workload</b></p> <p>2,5 CP / 75 hours in total, including 14 lab hours. 1 SWS L</p>
<b>6</b>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully finish the lab part of the module. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Successful completion (including report) of all lab and simulation exercises</li> </ul> <p><b>Examination Type:</b> written exam / oral exam / practical exam (will be communicated upon start of the module) covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> written exam: 90 minutes; oral exam: 30 minutes; practical exam: 60 minutes</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>Parallel attendance of the modules Power Electronics for Drives and Energy Systems and Advanced Control of electric Drives</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>

**MPwp05 Switch Gear**

<b>1</b>	<b>Module Name</b> Switch gear
<b>1.1</b>	<b>Module Identifier</b> MPwp05
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Switchgear -Lecture
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Betz
<b>1.6</b>	<b>Additional Instructors</b> ---
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p><b>Content of course „Switchgear – Lecture“:</b> Participants will be exposed to and gain theoretical experience with switchgear for high voltage and medium voltage. Furthermore, special solutions for dc circuit breaker for medium voltages are covered. The course will cover:</p> <ul style="list-style-type: none"> <li>- Layouts and concepts of substations with respect to high-, medium- and low-voltage levels.</li> <li>- Integration of switchgear into substations and interaction with different substation layouts.</li> <li>- Functionality, technical requirements and application of circuit breakers, load disconnectors, disconnectors and earthing switches.</li> <li>- Arc quenching in circuit breakers (high voltage, medium voltage, low voltage) and load disconnectors with respect to AC and DC systems. Consideration of arc quenching in SF<sub>6</sub>, Air and Vacuum.</li> <li>- Protection philosophy of switchgear (selectivity by rating and/or time scaling).</li> <li>- Design and of test facilities to obtain highest testing power: direct test circuits, synthetic test circuits with current or voltage superposition. Dimensioning of synthetic circuits with current superposition for power switching tests.</li> <li>- Normative regulations for type tests (like power switching or capacitive switching) and routine tests</li> <li>- Future trends</li> </ul>

<p><b>3</b></p>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>- Functionality of circuit breaker, load breaker, disconnecter and earthing switches.</li> <li>- Physical behavior of arcing phenomenon and different arc quenching methods in SF<sub>6</sub>, Air and Vacuum.</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>- Test procedures for circuit breaker with respect to dielectric, thermal, dynamical, mechanical and switching performance.</li> <li>- Dimensioning rules to design switchgear.</li> <li>- Dimensioning rules for synthetic test circuits to generate i.e. higher short circuit currents or steeper rate of rise of the recovery voltage.</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>- Apply and transfer the known theoretical rules for protection devices to real applications.</li> <li>- To develop higher ratings based on dielectric and thermal behavior of existing switchgear.</li> <li>- Transfer the methods of increasing voltage strength (like pressure, gas medium, painting of conductors) to new designs of switchgear.</li> <li>- Transfer the knowledge of arc quenching methods to increase the short current rating of i.e. circuit breakers.</li> <li>- To transfer the lecture content into new switchgear design and to judge future trends in switchgear.</li> </ul>
<p><b>4</b></p>	<p><b>Course Organization and Structure</b></p> <p>lecture (V)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>2,5 CP / 75 hours in total, including 28 hours classroom teaching. 2 SWS V</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> None</p> <p><b>Examination Type:</b> Written exam covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 60 minutes</p>
<p><b>7</b></p>	<p><b>Necessary Prerequisites</b></p> <p>None</p>

<b>1.1</b>	<b>Module Identifier</b> MPwp08
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Applied Programming - Lecture Applied Programming - Exercises
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Graf
<b>1.6</b>	<b>Additional Instructors</b> ---
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>The module aims at software knowledge and skills of a power engineer who is working on general engineering tasks (but not in the development of complex software systems or software products). It also enables professional negotiation with software manufacturers during the acquisition of software solutions.</p> <p>The module covers the following topics:</p> <ul style="list-style-type: none"> <li>- Introduction of a universally applicable scripting language including (basic) graphical user interface support</li> <li>- development of small to medium size software tools with elementary graphical user interface for specific</li> <li>- engineering tasks (on the work group level), introduction to software testing</li> <li>- data formatting and preparation for application programs and visualization tools</li> <li>- transformation between different data formats (Excel, CSV, XML), merging data from different sources</li> <li>- Methods and tools for the analysis and visualization of measured data <ul style="list-style-type: none"> <li>o different types of diagrams, advantages and disadvantages</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>○ methods of data quality assurance, bad data detection and elimination</li> <li>- Introduction of data base software             <ul style="list-style-type: none"> <li>○ limitations of spread sheet software and characteristics of data base applications</li> <li>○ data base setup and design, data bases queries (SQL)</li> <li>○ use of data base software for typical engineering tasks</li> </ul> </li> <li>- Methods and tools of requirements engineering             <ul style="list-style-type: none"> <li>○ methods of software specification and description, introduction of UML diagrams</li> <li>○ stakeholder, business process and use case identification, description, verification and management</li> <li>○ architectural views, structure of big software systems, decomposition and interface design</li> <li>○ criteria for the evaluation and selection of standard software</li> </ul> </li> </ul> <p>The topics are introduced in the lecture and practiced in exercises</p>
<p><b>3</b></p>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b> the participant understands</p> <ul style="list-style-type: none"> <li>- the industrial software engineering processes and development tasks</li> <li>- structure and potential of big data base applications</li> <li>- the requirements engineering and software specification processes</li> </ul> <p><b>to apply:</b> the participant can</p> <ul style="list-style-type: none"> <li>- specify, develop and test small to medium size software tools</li> <li>- use a script language for day to day data preparation, analysis and visualization tasks</li> <li>- design a small data base and retrieve information by specifying data base queries</li> </ul> <p><b>to transfer:</b> the participant can</p> <ul style="list-style-type: none"> <li>- prepare the setup and design of big data base applications</li> <li>- analyze requirements and specify application software for acquisitions and tenders</li> <li>- negotiate with software manufactures and manage the acceptance procedure</li> </ul>
<p><b>4</b></p>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>5 CP / 150 hours in total, including 56 hours classroom teaching and lab. 2 SWS V / 2 SWS L</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p>In order to write the end-of term exam, it is required to successfully present the results of the exercises</p> <p><b>Examination Prerequisites:</b> In order to participate in the module exam, it is required to successfully present the results of the exercises. Successful fulfillment of prerequisites are measured by:</p> <ul style="list-style-type: none"> <li>- Presentation</li> <li>- Exercises</li> </ul>

	<p><b>Examination Type:</b> Written exam or presentation covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 90 minutes (written exam), 20 minutes (presentation)</p>
<b>7</b>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<b>8</b>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<b>9</b>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<b>10</b>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Power Engineering. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.</p>
<b>11</b>	<p><b>Literature</b></p> <p>The lecture notes and further material are provided in electronic form.</p> <p>Further literature recommendations will be provided during the lecture.</p>

**MPwp09 Hydrogen Technique and Fuel Cells**

<b>1</b>	<b>Module Name</b> Hydrogen Technique and Fuel Cells
<b>1.1</b>	<b>Module Identifier</b> MPwp09
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Hydrogen Technique and Fuel Cells - Lecture
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Glotzbach
<b>1.6</b>	<b>Additional Instructors</b> Zijad Lemeš
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<b>Module Content</b> <p>The module gives an overview of hydrogen technology and fuel cells. Participants will gain experience with these technologies. The course will cover</p> <ul style="list-style-type: none"> <li>- Hydrogen, combustion, storage and handling</li> <li>- Hydrogen production and electrolysis</li> <li>- Hydrogen infrastructure</li> <li>- Fuel cells: basic function, thermodynamics and electrochemistry, efficiency, electrical behavior</li> <li>- Fuel cell types: Alkaline Fuel Cell (AFC), Polymer Electrolyte Membrane Fuel Cell (PEMFC), Direct-Methanol Fuel Cell (DMFC), Phosphoric Acid Fuel Cell (PAFC), Molten Carbonate Fuel Cell (MCFC), Solid Oxide Fuel Cell (SOFC)</li> <li>- Fuel cell systems</li> <li>- Components and assemblies for fuel cell systems</li> </ul>

<p><b>3</b></p>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b> The students understand the physical and chemical properties of hydrogen, the handling of hydrogen and its storage. They understand the combustion processes energetically, chemically and in terms of mass flow and can calculate them. Furthermore, they understand the different fuel cells in their properties, in their construction and in their chemical combustion process and can calculate them. They understand the fuel cells in your applications with their advantages and disadvantages. Participants will have an in-depth understanding of the fundamental physical and technical concepts of fuel cell power systems and hydrogen technologies.</p> <p><b>to apply:</b> Students are able to analyze and dimension fuel sell systems including the hydrogen tank systems. This includes the calculation of all mass flows, electrical power and efficiencies.</p> <p><b>to transfer:</b> Transfer to new and more complex fuel cell systems. In addition, students are qualified in planning and designing complex systems of different fuel cell application and include these to renewable energy systems.</p>
<p><b>4</b></p>	<p><b>Course Organization and Structure</b></p> <p>lecture (V)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>2,5 CP / 75 hours in total, including 28 hours classroom teaching. 2 SWS V</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p><b>Examination Prerequisites:</b> None</p> <p><b>Examination Type:</b> Written exam or Presentation covering the complete content of the module at the end of the semester. A make-up exam will be offered during the following semester.</p> <p><b>Examination Duration:</b> 60 minutes (Written Exam), 20min (Presentation)</p>
<p><b>7</b></p>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<p><b>8</b></p>	<p><b>Recommended Prerequisites</b></p> <p>None</p>
<p><b>9</b></p>	<p><b>Duration and Frequency of Course</b></p> <p>see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>
<p><b>10</b></p>	<p><b>Applicability /Utilization</b></p> <p>This module is applicable for the major Power Engineering. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.</p>

**11 Literature**

The following literature material will be provided:

- Johannes Töpler, Jochen Lehmann, "Hydrogen and Fuel Cell - Technologies and Market Perspectives", Springer
- Andrew L. Dicks, David A. J. Rand, "Fuel Cell Systems Explained", Wiley
- Ryan O'Hayre, Suk-Won Cha, Whitney Colella, Fritz B. Prinz, "Fuel Cell Fundamentals", Wiley

Further literature recommendations will be provided during the lecture.

**MPwp10 Power System Protection**

<b>1</b>	<b>Module Name</b> Power Systems Protection
<b>1.1</b>	<b>Module Identifier</b> MPwp10
<b>1.2</b>	<b>Module Type</b> Elective
<b>1.3</b>	<b>Course Names</b> Power Systems Protection – Lecture & Lab
<b>1.4</b>	<b>Semester</b> 1 or 2
<b>1.5</b>	<b>Module Responsible and Instructor</b> Prof. Dr. Krontiris
<b>1.6</b>	<b>Additional Instructors</b> -
<b>1.7</b>	<b>Study Program</b> Master / Major Power Engineering
<b>1.8</b>	<b>Teaching Language</b> English
<b>2</b>	<p><b>Module Content</b></p> <p>Lecture:            Planning, design and dimensioning of the protection technology of electrical power supply networks (e.g. high-voltage overhead lines, cable networks, gas-insulated switchgear). The following aspects are covered:</p> <ul style="list-style-type: none"> <li>– Design, mode of operation, nominal data of current and voltage transformers</li> <li>– Function of protective devices and selectivity in electrical systems and networks</li> <li>– Use of overcurrent relays as well as distance, differential and breaker failure backup protection in high-voltage networks</li> </ul> <p>Laboratory:</p> <ul style="list-style-type: none"> <li>– Examination of current transformers</li> <li>– Setting and testing of overcurrent relays and differential relays</li> <li>– Investigation of distance protection in radial, ring and parallel line networks</li> <li>– Earth fault detection</li> </ul>

<p><b>3</b></p>	<p><b>Learning Outcome / Competencies</b></p> <p><b>to understand:</b></p> <ul style="list-style-type: none"> <li>– Students know the function of protective devices for the power supply (overcurrent relays as well as distance, differential and breaker failure backup protection).</li> <li>– Students are familiar with the behaviour of current and voltage transformers.</li> <li>– Students understand the function of protective devices and their selectivity in electrical systems and networks.</li> </ul> <p><b>to apply:</b></p> <ul style="list-style-type: none"> <li>– Students know how to set and check protective devices and can apply the different types of relays.</li> </ul> <p><b>to transfer:</b></p> <ul style="list-style-type: none"> <li>– Students are able to apply different testing methods and can assess the effectiveness of the protective devices in the model system and in the network.</li> </ul>
<p><b>4</b></p>	<p><b>Course Organization and Structure</b></p> <p>lecture (V) / laboratory (L)</p>
<p><b>5</b></p>	<p><b>Credits and Workload</b></p> <p>2,5 CP / 75 hours in total, including 28 SWS hours classroom teaching. 1 SWS V / 1 SWS L</p>
<p><b>6</b></p>	<p><b>Examination Modalities</b></p> <p>In order to write the end-of term exam, it is required to have successfully finished the laboratory and submitted the related documentation.</p> <p><b>Examination Prerequisites:</b> Successful fulfillment of prerequisites is measured by:</p> <ul style="list-style-type: none"> <li>– attendance in all laboratory exercises</li> <li>– quality of reports on laboratory exercises</li> </ul> <p><b>Examination Type:</b> Examination type: written exam (default) / oral exam / practical exam (will be communicated upon start of the module)</p> <p><b>Examination Duration:</b> 90 minutes (written exam)</p>
<p><b>7</b></p>	<p><b>Necessary Prerequisites</b></p> <p>None</p>
<p><b>8</b></p>	<p><b>Recommended Prerequisites</b></p> <p>Power System Operation, Power System Planning</p>
<p><b>9</b></p>	<p><b>Duration and Frequency of Course</b></p> <p>Once a year, see module description of Elective 1 to 3 (MWP01, MWP02, MWP03)</p>

<b>10</b>	<b>Applicability /Utilization</b>  This module is applicable for the major Power Engineering and as elective course of master WING. See appendix 2 BBPO (Compulsory options catalogues) for its suitability for other majors.
<b>11</b>	<b>Literature</b>  The following literature material will be provided: Lecture notes and slides Further references will be provided during the course

## **Major Power Engineering – general electives / electives from other majors**

MGwp01	Research Project
MGwp02	Selected Research Topics
MGwp03	Ethics, Engineering, and Ecology
MAwp01	Model-based Real-time Simulation of Mechatronic Systems
MAwp04	Autonomous Mobile Robots
MAwp05	Advanced Graphical Programming of Control Systems
MAwp06	Advanced Sensors for the Internet of Things
MCwp01	Digital Signal Processing Applications
MCwp02	Wireless Systems (Technologies)
MCwp03	Network Security
MCwp04	Mobile Communications
MCwp05	Optical Communications
MCwp06	(I)IoT and Cloud Networking
MCwp07	Smart Home
MCwp08	Image and Video Processing
MMwp02	Safety in Embedded Control Systems
MMwp04	Advanced Software Design Techniques
MMwp05	Security in Connected Embedded Systems
MMwp07	Advanced Driver Assistance Systems and Automated Driving
